

Deterrent technique to repel pigeons

Characteristics:

- **Economical**
- **Ready to fit**
- **Stainless-steel strands**
- **Several models available**
- **Anti-UV-treated polycarbonate base**
- **SELFIXING® silicone glue in a 310 ml cartridge, anti-UV-treated and antifungal**

Utilisation

DEPIGEONAL®, the deterrent technique to repel pigeons, is ideal for cornices, window sills, louvres, terraces, roofing, pilasters, sculptures, etc.

Technical specifications

- Modules of 31 cm or 33,7 cm, 3 to 1 linear metre
- Stainless-steel metal strands / 1.3 mm, 1.4 mm
- Anti-UV-treated polycarbonate base

State of the surface

DEPIGEONAL® can be fitted to every type of surface (stone, wood, zinc, concrete, etc.) using a silicone adhesive. The surface must be clean, dry, sound and solid.

Instructions

1. Cut off the tip of the silicone cartridge fixed on an applicator with a cutter or a pair of scissors.
2. Apply a line of silicone glue to the underside of the module.
3. Fit the DEPIGEONAL®, pressing hard with your fingers. The silicone must extrude through the cavities.

The length of DEPIGEONAL facilitates its application, i.e. 3 modules for 1 metre, leaving a space of 3 cm between each module. Where necessary, its base enables a clean break at the required point.

DEPIGEONAL® recommendations

On large surfaces, protect them well at the edges and leave at most 5 cm between two modules. Never fit the product to greasy or damp surfaces, or when the temperature is lower than 5°C.

Glue: We recommend you use our SELFIXING silicone glue, suitable for fitting DEPIGEONAL®.

Cleaning: For a better guarantee, prepare your areas with **Selcleaning®**, the natural cleaning.
